

Resources for Mobility

With a wealth of accessible information, the Ergo-in-Net project has put together some of the most useful tools available to the practitioner interested in transnational mobility. Useful resources have been summarised concerning the European Union more generally and equally focusing on specific countries, namely those belonging to the project partnership (Italy, France, Germany, Poland and the UK). In addition, themes have been covered including training for practitioners, existing networks, labour market information, internships, education, links to European Commission programmes supporting mobility for education and training, recognition of qualifications and legal issues. The presentation gives a brief and practical overview of the rich information we have included in the Ergo-in-Net outputs as a whole with direct links.
